

**Assignment -4**  
**Python Programming**

Assignment Date	25 October 2022
Student Name	M.Vignesh
Student Roll Number	720819106108
Maximum Marks	2 Marks

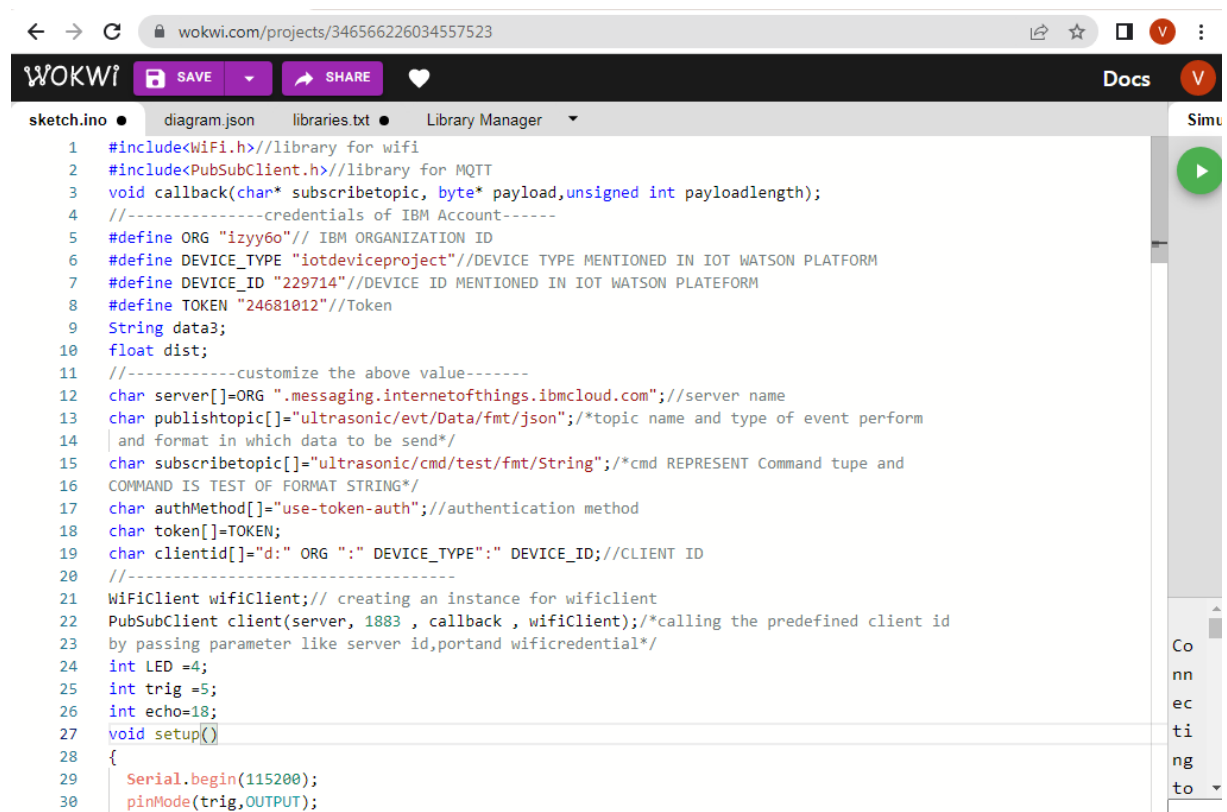

**Question-1:**

**Write code and connections in wokwi for ultrasonic sensor.**

**Whenever distance is less than 100 cms send "alert" to ibm cloud and display in device recent events.**

**Upload document with wokwi share link and images of ibm cloud**

**Solution:**

```
1 #include<WiFi.h>//library for wifi
2 #include<PubSubClient.h>//library for MQTT
3 void callback(char* subscribetopic, byte* payload,unsigned int payloadlength);
4 //-----credentials of IBM Account-----
5 #define ORG "izyy6o"// IBM ORGANIZATION ID
6 #define DEVICE_TYPE "iotdeviceproject"//DEVICE TYPE MENTIONED IN IOT WATSON PLATFORM
7 #define DEVICE_ID "229714"//DEVICE ID MENTIONED IN IOT WATSON PLATFORM
8 #define TOKEN "24681012"//Token
9 String data3;
10 float dist;
11 //-----customize the above value-----
12 char server[]=ORG ".messaging.internetofthings.ibmcloud.com";//server name
13 char publishtopic[]="ultrasonic/evt/Data/fmt/json";//topic name and type of event perform
14 |and format in which data to be send*/
15 char subscribetopic[]="ultrasonic/cmd/test/fmt/String";//cmd REPRESENT Command tupe and
16 COMMAND IS TEST OF FORMAT STRING*/
17 char authMethod[]="use-token-auth";//authentication method
18 char token[]=TOKEN;
19 char clientid[]="d:" ORG ":" DEVICE_TYPE":" DEVICE_ID;//CLIENT ID
20 //-----
21 WiFiClient wificlient;// creating an instance for wificlient
22 PubSubClient client(server, 1883 , callback , wificlient);/*calling the predefined client id
23 by passing parameter like server id,portand wificredential*/
24 int LED =4;
25 int trig =5;
26 int echo=18;
27 void setup()
28 {
29   Serial.begin(115200);
30   pinMode(trig,OUTPUT);
```

## DATA SENT TO IBM CLOUD ON NO OBJECT DETECTED

The screenshot shows the IBM Cloud IoT Platform interface for a device named 'DISTANCEDETECT'. The device is in a 'Disconnected' state. The 'Recent Events' tab is selected, displaying a table of events. The table has four columns: Event, Value, Format, and Last Received. There are five rows of data, all showing a distance of 79.66 and an object of 'Near'. The 'Last Received' column indicates the events occurred 'a few seconds ago'.

Event	Value	Format	Last Received
Data	["distance":79.66,"object":"Near"]	json	a few seconds ago
Data	["distance":79.64,"object":"Near"]	json	a few seconds ago
Data	["distance":79.66,"object":"Near"]	json	a few seconds ago
Data	["distance":79.64,"object":"Near"]	json	a few seconds ago
Data	["distance":79.66,"object":"Near"]	json	a few seconds ago

## WHEN NO OBJECT DETECTED BY ULTRASONIC DETECTOR

The screenshot shows the Wokwi simulation environment. On the left, the 'sketch.ino' file is open, displaying code for an ESP32 connected to an ultrasonic sensor. The code includes comments and defines variables for the device type, ID, token, and topics. The main loop sends data to the IBM Cloud IoT Platform when no object is found.

```
1 #include<WiFi.h>//library for wifi
2 #include<PubSubClient.h>//library for MQTT
3 void callback(char* topic, byte* payload, unsigned int length) {
4 //-----credentials of IBM Account-----
5 #define ORG "izyy6o"// IBM ORGANIZATION
6 #define DEVICE_TYPE "iotdeviceproject"//
7 #define DEVICE_ID "229714"//DEVICE ID ME
8 #define TOKEN "24681012"//Token
9 String data3;
10 float dist;
11 //-----customize the above value-----
12 char server[] = ORG ".messaging.internetofthings.ibmcloud.com";
13 char publishTopic[] = "ultrasonic/evt/Data";
14 //and format in which data to be send*/
15 char subscribeTopic[] = "ultrasonic/cmd/test";
16 //COMMAND IS TEST OF FORMAT STRING*/
17 char authMethod[] = "use-token-auth"; //auth
18 char token[] = TOKEN;
19 char clientId[] = "d:" ORG ":" DEVICE_TYPE";
20 //-----
21 WiFiClient wifiClient; // creating an instance of the client
22 PubSubClient client(server, 1883, callback, wifiClient);
23 by passing parameter like server id, port, auth method, token, client id
24 int LED = 4;
25 int trig = 5;
26 int echo = 18;
27 void setup() {
28 {
29 Serial.begin(115200);
```

The simulation window shows the circuit diagram of an ESP32 connected to an ultrasonic sensor. The sensor's VCC pin is connected to the ESP32's 5V pin, GND to GND, and the trig pin to the ESP32's trig pin. The echo pin is connected to the ESP32's echo pin. The simulation output shows the following sequence of events:

```
no object found
Sending payload: {"distance":141.21,"object":"No"}
Publish ok
Distancein cm141.21
no object found
Sending payload: {"distance":141.21,"object":"No"}
Publish ok
```
